

## Airbags and the Outlook® auto\_shade™

It is recommended that the auto\_shade™ not be used if any part of the auto\_shade™, particularly the positioning of the strapping and the rod (See diagram) impedes the inflation of an airbag.

This would primarily only affect doors with torso side airbags (airbags that inflate from behind the car door panel). This type of airbag is not common in Australian cars, as most cars are fitted with curtain airbags. If unsure of the airbag or airbag positioning either consult the car manual or contact the car manufacturer before fitting the auto\_shade™

**Do not use if the strapping or rod covers or obstructs any rear door panel airbags**
